Author: Master's Student

Page 2 - Abstract & Intro

This is the second page introduction.

MINISTRY OF SCIENCE AND HIGHER EDUCATION OF THE REPUBLIC OF KAZAKHSTAN
Kazakh University of Technology and Business named after K. Kulazhanov
Faculty of "Engineering and Information Technologies" Department of "Information Technologies"
REPORT on scientific research work NIRM 03 EP 7M06136 - "Information Systems"
Topic: "Methods of Self-Learning Speech Recognition and Their Adaptation for the Kazakh Language"
Course: 1 Master's student: _____
Scientific supervisor: Kasekeyeva A.B., PhD, Assistant Professor _____ Grade: Date: "___" _____
Astana 2025

CONTENTS

1. Self-Supervised ASR Architectures and Models

1.1. wav2vec 2.0: Foundational Self-Supervised Learning Framework

1.2. HuBERT: Hidden-Unit BERT for Speech Representation

1.3. Conformer Architecture for Speech Recognition

1.4. OpenAI Whisper: Large-Scale Multilingual ASR

1.5. GigaAM: Efficient Self-Supervised Learner

2. Adapting Self-Learning Models to Low-Resource Languages

2.1. Cross-Lingual Self-Supervised Pre-training

2.2. Multilingual Training on Related Turkic Languages

2.3. Data Augmentation and TTS Integration

2.4. Fine-tuning Strategies for Kazakh ASR

3. Kazakh Speech Corpora and Resources 3.1. Kazakh Speech Corpus (KSC) 3.2. KSC2: Industrial-Scale

4. Case Studies and Experimental Results

4.1. Comparison of ASR Models on Kazakh Datasets

4.2. Fine-tuning Wav2Vec2.0 and Whisper for Kazakh

4.3. Multilingual Turkic ASR System by ISSAI

4.4. Practical Implementation Guidelines

REFERENCES

1. Self-Supervised ASR Architectures and Models

Modern speech recognition has undergone a significant transformation, shifting from fully-supervised training to self-supervised learning.

- 1.1. wav2vec 2.0: Foundational Self-Supervised Learning Framework

A landmark work in self-supervised speech representation learning is wav2vec 2.0, introduced by Baevski et al. [1].
